	· .	 25x1
	cessfully completed in various rye fields of Hungary.	25X1
3.	Growth of Ergot in	
٠.		
	a. The environmental conditions which are conducive to the development and growth of the disease (ergot) depend to a great extent upon humidity. Nevertheless, ergot is generally found throughout all the rye growing areas of the country. The major yielding areas, however, are:	
	(1) Salaj. This is one of the major ergot producers of the country. in any good rainy season collected five thousand kilograms.	25 <u>x</u> 1
	(2) <u>Lugoj - Sibu.</u> Although this sres was appable of yielding two thousand pounds never collected over 500 kflograms.	25X1
	(3) Beius. This region produced on a hashs comperable to Lucion	
	One Hungarian or Rumanian sore (5755 square meters) was depable of yielding from 90 to 130 kilograms of ergot.	
•	Techniques of Inoculation	
	a. Rumania is undeveloped in the inoculation of ergot.	25X1 25X1
	insect method can be referred to as the sugar-water method. In other words,	25X1
	previously infected with alayine purpores (ergot); consequently, when the insects had made contest with the infected agents or test the infected agents of the infected agents.	•
	infectation the vater to the rye plants. Through insect	25X1
	by the insect itself. The temperature of the liquid used for the above varied from mious to plus five degrees centigrade.	25X1
